Analytic Subject Index to Volume 25

(References with (A) are to abstracts of papers presented at meetings of the Optical Society of America.)

Absorption, including absorption spectra
Attenuation of light in the lower atmosphere, E. O. Hulburt—125, 197 (title only)
Light absorption in the atmosphere and its photochemistry, O. R. Wulf—197 (title only), 231
Light absorption and distribution of atmospheric ozone, R. W. Ladenburg—259
Photoelectric method of measuring the transparency of the lower atmosphere, G. M. Byram—393
Radiometric measurements of heat absorbing glass, R. S. Estey—46(A)
Transmission of ultraviolet radiation through Chinese window papers, Shang-Yi Ch'en, Chao-Ying Meng and W. Band—67

Astronomy, including astronomical instruments (see also **Telescopes**)
Astronomical seeing, J. A. Anderson—152
New Yerkes auto-collimating spectrograph as used on the Perkins 69-inch reflecting telescope, G. W. Moffitt—142
Thermoelectric photometer of the Amherst College Observatory, W. K. Green—190
Work of the Naval Observatory, J. F. Hellweg—42 (title only)

Atmospheric phenomena
Astronomical seeing, J. A. Anderson—197 (title only)
Atmospheric optics in aviation lighting, F. C. Breckenridge—197 (title only)
Attenuation of light in the lower atmosphere, E. O. Hulburt—125
Distribution of atmospheric ozone, R. Ladenburg—197 (title only)
Geometrical theory of halos, E. W. Woolard—197 (title only)
Light absorption in the atmosphere and its photochemistry, O. R. Wulf—197 (title only), 231
Light absorption and distribution of atmospheric ozone, R. W. Ladenburg—259
Optical phenomena of clouds, W. J. Humphreys—197 (title only)
Photoelectric method of measuring the transparency of the lower atmosphere, G. M. Byram—393
Scattering of light by atmospheric particles, J. A. Stratton—197 (title only)
Visibility photometers for measuring atmospheric transparency, G. M. Byram—388
Visibility of signals through fog, Gjon Mili—197 (title only), 237

Cameras (see **Photography, including cameras**)

Christiansen filters (see **Filters**)

Color and Colorimetry (see also **Absorption, including absorption spectra**)
Color blending computations in psychological terms, I. H. Godlove—44(A)
Coordinated system of optical filters for color-temperature determinations, F. Benford—136
Disk colorimetry; including a comparison of methods for computing tristimulus values for certain disks, D. Nickerson—253
Disk colorimetry information, D. Nickerson—200(A)
Estimation of chromaticity differences and nearest color temperature on the standard 1931 I. C. I. colorimetric coordinate system, D. B. Judd—199(A)
Maximum visual efficiency of colored materials, D. L. MacAdam—361
Maximum visual reflectance of a surface having a given chromaticity, D. L. MacAdam—199(A)
Maxwell triangle yielding uniform chromaticity scales, D. B. Judd—24
Photoelectric colorimeter with logarithmic response, R. H. Müller and G. F. Kinney—201(A), 342
Surface color, D. B. Judd—44(A)
Theory of the maximum visual efficiency of colored materials, D. L. MacAdam—249

Comparators
Direct reading comparator for spectra, L. G. Hoxton and D. W. Mann—201(A)

Crystals, properties of (see also **X-rays**)
Photo-electromotive forces and currents in single crystals of Se, R. M. Holmes—326

Densitometry
Apparatus for darkfield photometry and densitometry, P. S. Williams and G. H. Scott—347
Contrast microphotometer, F. W. Sears—162
Eastman transmission and reflection densitometer, C. A. Morrison and J. W. McFarlane—417
New microdensitometer based on that of Hartmann, S. Jacobsohn and W. H. Kliever—244
Simplified microdensitometer based on that of Hartmann, S. Jacobsohn and W. H. Kliever—49(A)

Diffraction gratings
Some stigmatic grating mountings, H. T. Smyth—312

Dispersion
Anomalous dispersion within absorption bands, A. H. Pfund—200(A)
Dispersion of CS_2 and CCl_4 in the infrared, A. H. Pfund—351

Filters (see also **Absorption, including absorption spectra**)
Applications of Christiansen filters to stellar energy spectra, C. G. Abbot—42 (title only)
Coordinated system of optical filters for color-temperature determinations, F. Benford—136
Filter isolating 560 mμ, K. S. Gibson—46(A), 131
Optimum grain size in the Christiansen filter, H. S. Denmark and W. M. Cady—330

Flicker (see **Photometry**)

Gloss (see **Photometry**)
Goniometry
Recording goniophotometer, J. M. Slater—218
Gratings (see **Diffraction gratings**)

Herschel effect (see **Photometry**)

Illumination
Aviation lighting research at the National Bureau of Standards. F. C. Breckenridge—45(A)
Experimental determination of the visual thresholds at low values of illumination, J. P. Conner and R. E. Ganoung—287
Infrared
Absorption tube for the investigation of gases in the photographic infrared, R. M. Badger, L. G. Bonner and P. C. Cross—355
Instruments (see **Methods and instruments, general**)
Interference of light and interferometry
Modification of the Fabry-Perot interferometer, R. C. Machler and R. A. Fisher—315
Polarization-interference phenomena in quartz spectrographs, J. W. Ellis and J. Kaplan—357

Latent image (see **Photography, including cameras**)
Lenses and mirrors
Simplified computation of Cartesian lens surfaces, L. Silberstein—340(L)
Light sources, properties and measurements
General purpose amplifier and its specific use in the actinometry of photoflash lamps, S. McK. Gray and H. J. Eckweiler—48(A)
Photometry and energy distribution of the high intensity Hg lamp, L. B. Johnson—36
Radiation and absorption of energy by W filaments at low temperatures, I. Langmuir and J. B. Taylor—321
Relative photographic effectiveness of some light sources, W. E. Forsythe and M. A. Easley—48(A)
Na alloy lamps, G. R. Fonda—412
Luminescence
Luminescence of frozen solutions of certain dyes, F. G. Wick and C. G. Throop—368
Luminescence of thorium oxide activated by rare earths, optimum concentration for different sources of excitation, F. G. Wick and C. G. Throop—57

Mapping
Optical device to aid in mapping from photographs, O. M. Miller—185, 201(A)
Methods and instruments, general
Heliostat for the Physics Laboratory, A. Adel—195
New astrophysical instruments of the Harvard Observatory, F. L. Whipple and D. H. Menzel—42 (title only)
Simple stroboscope, A. J. O'Leary—375
Microphotometry (see **Densitometry**)
Mirrors (see **Lenses and mirrors**)
Mitogenetic rays
Some phases of the mitogenetic ray phenomena, A. Hollaender and W. D. Claus—270

Optical Society of America
Annual report of secretary, for 1934—224
Annual report of treasurer, for 1934—226
Directory Number: Table of contents
Purpose and scope of the Society—93
Scope of optics—93
Historical note—94
Activities of the Optical Society—95
Medals and awards—95
The Frederic Ives medal—95
The Adolph Lomb memorial—96
Organization—96
By-laws—96
Officers and directors—101
Journal of the Optical Society—101
Committees—102
Representatives and delegates to other organizations—102
Past officers—103
Meetings—106
Alphabetical directory of members, 107
Geographical directory of members—120
Members in the United States according to states and towns—120
Foreign members according to country—124
Journal: statement of operations for the year ending December 31, 1934—196
Notice of election of officers—92
Proceedings of the New York meeting, February 22, 1935—197
Minutes of Board of Directors, February 22, 1935—197
Program of contributed papers—199
Proceedings of the Nineteenth annual meeting, Washington, October 18–20, 1934—42
Minutes of the Board of Directors—43
Program of contributed papers—44
Optics, geometrical
Convenient set of equations for computing third order aberrations, I. C. Gardner—45(A)
On the fundamental optical invariant, the optical tetrality principle, and on the new development of Gaussian optics based on this law, M. Herzberger—295
Graphical method of locating conjugate image points, H. F. Bennett—45(A)
Simplified computation of Cartesian lens surfaces, L. Silberstein—340
Testing camera for photographic objectives, I. C. Gardner and F. A. Case—45(A)
Optics, physical
Comments on the paper by R. T. Birge "On the nature of unpolarized light," L. A. DuBridge—182
On the nature of unpolarized light, R. T. Birge—179
Notes on resistances of Se cells deposited in certain gases, L. W. Jones—1
Optical properties of MgO, J. Strong and R. T. Brice—207

Photoelectric phenomena
Cd-Mg alloy photo-tubes, L. R. Koller and A. H. Taylor—184
Change in the photoelectric threshold of Th and similar metals by O_2, H. C. Rentschler and D. E. Henry—201(A)
Note on the names of photoelectric devices—C. H. Sharp—165
Photo-electromotive forces and currents in single crystals of selenium, R. M. Holmes—326
Proposal in nomenclature, C. H. Sharp—46(A)
Quantum efficiency of certain light sensitive devices, C. C. Hein—203
Photoflash lamps (see **Light sources**)
Photographic photometry (see **Photometry**)
Photography, including cameras
Blackening of photographic plates by long wave-length x-rays, F. R. Hirsh, Jr.—229
Concerning interrupted photographic exposure, C. C. Long, F. E. E. Germann and J. M. Blair—382
Effect of temperature upon reciprocity law failure in photographic exposure, J. H. Webb—4
Fading of the latent photographic image on standing, M. C. Hylan and J. M. Blair—246
Fifty-inch precision copying camera of the U. S. Coast and Geodetic Survey, O. S. Reading—46(A)
Minimum useful gradient as a criterion of photographic speed, L. A. Jones and M. E. Russell—396
Optical device to aid in mapping from photographs, O. M. Miller—185, 201(A)
Photographic plates for use in spectroscopy and astronomy. IV. C. E. K. Mees—80, 200(A)
Relative photographic effectiveness of some light sources, W. E. Forsythe and M. A. Easley—48(A)
Photometry
Apparatus for darkfield photometry and densitometry, P. S. Williams and G. H. Scott—347
Area and critical fusion frequency of flicker, S. Hecht and E. L. Smith—199(A)
Critical fusion frequency in different spectral regions, S. Hecht and S. Shlaer—199(A)
Integrating factor of the photometric sphere, F. Benford—332
Measurement of gloss, R. S. Hunter—47(A)
Photometry and energy distribution of the high intensity Hg lamp, L. B. Johnson—36
Recording goniophotometer, J. M. Slater—218
Thermoelectric photometer of the Amherst College Observatory, W. K. Green—190
Visibility photometers for measuring atmospheric transparency, G. M. Byram—388
Physiological optics
Area and critical fusion frequency of flicker, S. Hecht and E. L. Smith—199(A)
Polarization
Polarization-interference phenomena in quartz spectrographs, J. W. Ellis and J. Kaplan—357
Radiation, general including thermal
Radiation and absorption of energy by W filaments at low temperatures, I. Langmuir and J. B. Taylor—321
Radiometric measurements of heat absorbing glass, R. S. Estey—46(A)
Spectral distribution of radiation from three reflector units, B. T. Barnes—167
Reflection (see also **Methods and instruments, general**)
Errors in reflectometry, A. H. Taylor—51
Maximum visual reflectance of a surface having a given chromaticity, D. L. MacAdam—199(A)
Study, by means of Huygen's principle, of the reflection of a spherical light wave from a moving plane mirror, N. Galli-Shohat—39
Scattering of light
Scattering of light by atmospheric particles, J. A. Stratton—197 (title only)
Scattering of light by suspensions of cells, H. Mestre—46(A)
Spectra, general
Spectral distribution of radiation from three reflector units, B. T. Barnes—167
Spectrophotometry and spectrography
Applications of Christiansen filters to stellar energy spectra, C. G. Abbot—42 (title only)
Automatic measurement, reduction and recording of wavelengths from spectrograms, G. R. Harrison—169
Direct reading comparator for spectra, L. G. Hoxton and D. W. Mann—201(A)
Filter isolating 560 mμ, K. S. Gibson—46(A), 131
Interpretation of data obtained with spectrophotometers of the polarizing type, R. D. Nutting—47(A), 211
New recording spectrophotometer, A. C. Hardy—305
New Yerkes auto-collimating spectrograph as used on the Perkins 69-inch reflecting telescope, G. W. Moffitt—142
Photographic plates for use in spectroscopy and astronomy. IV. C. E. K. Mees, 80, 200(A)
Polarization-interference phenomena in quartz spectrographs, J. W. Ellis and J. Kaplan—357
Prism spectrographs with prism mountings automatically adjusted to minimum deviation, H. E. White—241
Some stigmatic grating mountings, H. T. Smyth—312
Spectrographic program of the National Geographic-U. S. Army stratosphere flight, B. O'Brien and T. A. Russell—45(A)
Stratosphere spectrographs, H. F. Kurtz and G. Fassin—45(A)
Submarine daylight
Penetration of red, green and violet components of daylight into Atlantic waters, R. H. Oster and G. L. Clarke—84
Seasonal changes in components of submarine daylight, E. A. Williams and C. L. Utterback—384

Telescopes
Influence of present trends in research on the design of astronomical telescopes and accessories, G. W. Moffitt—42 (title only), 71
Modern large telescope design, F. G. Pease—42 (title only), 156
New Yerkes auto-collimating spectrograph as used on the Perkins 69-inch reflecting telescope G. W. Moffitt—142
Optics of reflecting telescopes, F. E. Ross—42 (title only)
Ritchey-Chrétien 40-inch aplantic reflector—principles of design and practical results, G. W. Ritchey—42 (title only)

Transmission of light (see **Absorption**)

Ultraviolet
Effect of ultraviolet rays on virulence of snake venoms, D. I. Macht—47(A)
Ultraviolet murals at the Franklin Institute, C. Bittinger—42 (title only)

Vision
Astronomical seeing, J. A. Anderson—152
Critical fusion frequency in different spectral regions, S. Hecht and S. Shlaer—199(A)
Determining the difficulty of visual tasks, M. Luckiesh and F. K. Moss—45(A)
Experimental determination of the visual thresholds at low values of illumination, J. P. Conner and R. E. Ganoung—287
Eye as an integrator of short light flashes, J. W. Beams—48(A)
Fatigue of the extrinsic ocular muscles while reading under Na and W light, M. Luckiesh and F. K. Moss—216
Maximum visual efficiency of colored materials, D. L. MacAdam—361
Maxwell triangle yielding uniform chromaticity scales, D. B. Judd—24
Resolution threshold of the continuously open eye, S. M. Newhall—63
Theory of the maximum visual efficiency of colored materials, D. L. MacAdam—249
Visibility of signals through fog, G. Mili—197 (title only), 237

X-rays (see also **Photography, including cameras**)
Blackening of photographic plates by long wavelength x-rays, F. R. Hirsh, Jr.—229
